Editorial Policy

This is the first CSR (Corporate Social Responsibility) Report published by ITOCHU Techno-Solutions Corporation (hereinafter called "CTC").

To promote CSR in the CTC Group, CTC and major group companies discussed what we could do through our main business and established the CSR vision (CSR Action Plan) of the CTC Group. The process, results and future efforts for this promotion of CSR are reported as a special feature. To ensure that everyone can understand the business of the CTC Group, the report further describes the connections between the CTC Group and society and is written with care to be easily comprehensible.

To create this report, we referred to the "Environmental Report Guidelines (2003 Edition)" by the Japanese Ministry of the Environment and the "Sustainability Reporting Guidelines 2006" by the Global Reporting Initiative.

Report Period

Fiscal 2006 (April 1, 2006–March 31, 2007)

Parts of the report contain information from just before the date of publication

Report Scope

CTC and major group companies

Publication Date

July 2007

CTC Group Profile

The CTC Group and Society

The CTC Group utilizes information technology to support the social infrastructure. This section shows our role in a variety of contexts in your daily life to help you understand the business of the CTC Group.

■ Creating comfortable and functional offices

We build secure and comfortable office environments and also realize satellite offices allowing users to work functionally even outside of the office. In the future, we aim to provide technology to promote a diversified work style not only in urban offices but also at home by teleworking*.

* Teleworking: a working style using telecommunications technology to allow flexible work without being restricted by working hours or locations such as offices

■ Data center

The CTC Group's data centers support a variety of information networks that are indispensable for people's daily lives. We provide society with stable systems operating non-stop 24 hours a day and 365 days a year.

■ Ubiquitous banking

Money transfers used to require people to visit a bank. Now, money can easily be transferred in a short time over, for example, the Internet. Our issues for the future are to find ways to eliminate operational mistakes and to further sophisticate security.

■ For the safety and security of society

Global warming, large-scale natural disasters, the energy issue and other problems seriously affect society and the environment. We aim to resolve these various problems using science and technology, contributing to the development of a safe and secure social infrastructure.

■ Making convenience stores more convenient

Information systems that allow convenience stores to share detailed ordering information with vendors and manufacturers through distribution centers help to line up the products that customers demand without any excess or shortage, and even allow them to prepare fresh boxed meals at any time.

■ Improving mobile phone services and safety

We contribute to advancement of mobile phone services offered by telecom carriers and improvement of security. Our work includes high-speed and stable data communication services, the restriction of harmful contents that also present a social problem, and the configuration of security services such as anti-virus measures.

■ Food safety

To ensure the delivery of safe food to everyone, we support information management covering all steps in the supply chain from production to distribution and sales.

■ Simplification of boarding procedures

Traditionally, airplane-boarding procedures were performed with passengers waiting in line at a counter before take-off. The development of a system that allows ticket issuance using a mobile phone reduced the time required for the procedure.
