CTC Offerings — Focus Areas

CTC provides optimal solutions and services across every phase of the IT lifecycle.

AI

Provides IT infrastructure for AI utilization, AI talent development solution, and testing service of systems in multi-vendor environments

Cloud Service

Offers CUVICmc2, our cloud service specialized in mission-critical systems, and multi-cloud services, based on technical capabilities cultivated through years of system integration experience

Security

In addition to providing the latest security systems, operates a SOC that remotely monitors the status of security devices

Digital Transformation (DX)

Supports corporate digital transformation with cutting-edge information technologies including data analytics and edge computing

Network

Supports 5G networks with SDN/NFV, drawing on technical expertise cultivated in building large-scale networks that underpin social infrastructure

IoT

Provides a platform for collecting, storing, managing, and analyzing data in real time from sensors installed on equipment and devices

Infrastructure Development

Delivers optimal IT environments tailored to customer needs by combining diverse products and the latest technologies

Application Development

Adopts agile development practices to accelerate development and offers the OutSystems low-code development platform also in ASEAN

System Testing

Evaluates and tests systems at the Technical Solution Center, one of Japan's largest and comprehensive testing facility supporting multi-vendor environments that closely mirror the planned deployment

System Operation and Outsourcing

Monitors customer IT systems remotely and streamlines operational tasks with automation technologies via the Remote Operation Center (ROC)

Maintenance Support Service

Has system maintenance engineers on stand-by across Japan, providing 24/7/365 multi-vendor support

Data Center

Backed by 30 years of operational experience, offers multi-carrier and multi-cloud connectivity to serve as a platform supporting digital transformation

Renewable Energy

Offers the E-PLSM, a cloud-based IoT platform that manages consumption of energy from renewable sources and has developed technologies for forecasting wind and solar power output

Science and Engineering Solution

Offers analysis and simulation technologies to solve diverse challenges including those in energy, environment, manufacturing, CAE, and social infrastructure

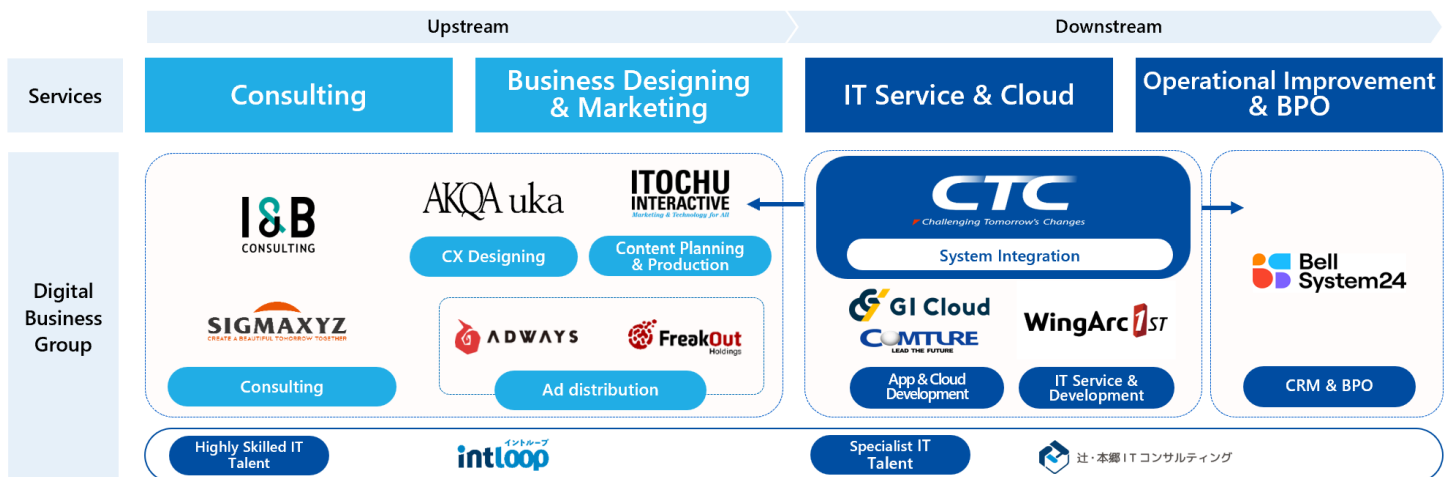

Life Science

Provides cutting-edge information technologies grounded in deep pharmaceutical and life science expertise and experience, and AI-powered data analysis solutions

GROUP SYNERGY — Collaboration with the ITOCHU Group Companies

As a core company in the ITOCHU Digital Business Group, which supports customers' digital transformation, we provide a wide range of services in collaboration with the group companies.
